

BAKING TECHNOLOGY

Baking Technology curriculum, often structured as a diploma or certificate (e.g. TVET CDACC level 4-5), provides comprehensive training in commercial bread making, pastry production, and confectionery. Key areas include ingredient science, dough management, specialized techniques (laminated dough), cake decorating, food safety, and business management.

Core curriculum components

- o **Yeast- Leavened Products:** Techniques for white bread, sweet bread, speciality breads, and dough management.
- o **Pastry & Confectionery Production:** Puff pastry, short crust, choux, tarts, cookies, and laminated dough.
- o **Cake Making & Decoration:** Specialized training in cake types, icing, piping, fondant, and multi-tiered wedding cake assembly.
- o **Baking Science & Technology:** Understanding ingredient functionality (Flour, yeast, fats) and chemical reactions.
- o **Commercial Operations & Safety:** Food safety standards (HACCP), bakery machinery maintenance, costing, and recipe structuring.

Course Structure & Focus:

- **Practical Focus:** High emphasis on hands-on training (often 60-80% practical), commercial workshop training, and industrial attachments.
- **Modes of Study:** Typically, 3 months to 2 years, depending on whether it is a proficiency certificate or diploma level.
- **Career Outcomes:** Graduates are qualified as pastry chefs, commercial bakers, bakery managers, or entrepreneurs.

Common Curriculum Subjects:

- Food Safety and Hygiene

- Baking Equipment Operations
- Industrial Baking Techniques
- Recipe Development and Costing
- Traditional and International Pastry Techniques

The curriculum frequently integrates modern baking trends and specialized dietary requirements, such as gluten-free or healthier baking alternatives.
