

CARPENTRY AND JOINERY

A Carpentry and Joinery course curriculum focuses on building practical woodworking skills, safety, and technical knowledge for construction and furniture manufacturing. Core modules include using hand/power tools, reading technical drawings, timber technology, site carpentry (roofing/framing), and shop joinery (doors/cabinets). Programs range from introductory certifications to advanced diplomas.

Core Curriculum Components

Workshop Safety & Tool Maintenance: Proper use of hand tools (chisels, saws) and portable power tools (routers, circular saws).

- o **Timber Technology:** Understanding wood types, properties, seasoning, and defects.
- o **Joinery Techniques:** Creating traditional joints (mortise and tenon, dovetails) for furniture and fixtures.
- o **Structural Carpentry (First Fix):** Constructing timber frames, floor joists, stud walls, and roof trusses
- o **Finishing Carpentry (Second Fix):** Installing door frames, window frames, skirting boards, and cabinetry.
- o **Reading Plans & Measurement:** Interpreting construction drawing and applying accurate marking-out methods.
- o **Health and Safety:** Regulations regarding construction site safety, PPE, and workshop health and safety.
- o **Industrial training/Internship:** Practical hands-on experience in a workshop or on a construction site.

Typical certification structure

- **Level 1 & 2 certificates:** Basic skills in furniture making, bench joinery, and site work.
- **Level 3 Diploma/Advanced certificate:** Complex joinery, roof framing, and supervisory skills

Common career paths include becoming a construction carpenter, finish carpenter, cabinet maker, or site supervisor.

Details on level ½ and Level 3 curricula can be provided. Also details on apprenticeship vs. Classroom training.
