

BUILDING TECHNOLOGY

Building technology courses focus on practical construction skills, covering masonry, carpentry, technical drawing, structural analysis, site management, and quantity surveying over 1.5 – 3 years. Curricula are regulated by KNEC or TVET CDACC, featuring modular units and industrial attachment, typically requiring KCSE or D + for entry.

Key Curriculum Areas

- 0 **Core Construction:** Masonry, carpentry, floor tiling, plumbing, and structural concrete technology.
- 0 **Technical Drawing:** Interpretation and creation of construction blueprints, CAD (Computer- AIDED Design).
- 0 **Management & Safety:** Site management, project scheduling, estimation, cost control, and OH & S (Occupational Health & Safety).
- 0 **Theory & Science:** Construction materials, applied science, mathematics, and surveying.

Typical Program Structure

- 0 **Craft Certificate (KNEC):** Generally a 1.5 – 2 year program designed for site supervision and artisan skills, featuring modules on construction materials, site management, and structural basics.
- 0 **Diploma in Building Technology (TVET):** A 3-year Level 6 program covering advanced topics like construction management, services (mechanical/electrical), and computer – aided design.

Common Core Units

1. **Building Construction I & II**
2. **Construction Materials** (Science & Technology)
3. **Technical Drawing/CAD**
4. **Estimating and Costing**
5. **Site Management & Supervision**
6. **Structural Mechanics**
7. **Entrepreneurship & Communication Skills**
