

FOOD AND BEVERAGE OPERATIONS

A Food and Beverage (F & B) course curriculum, such as those offered by KNEC or specialized hospitality schools, covers both production and service management. Key areas include culinary techniques, menu planning, cost control, beverage management, and health & safety standards. It typically combines practical hands-on training with business management principles to prepare students for roles in hotels, restaurants, and catering sectors.

Core Curriculum Components:

- **Food and Beverage Production (Culinary Arts):** Fundamentals of cooking techniques, recipe development, international cuisine, and food safety/hygiene.
- **Food and beverage Service:** Restaurant service techniques, banquet management, menu design, and customer service excellence.
- **Management & Operations:** Food & beverage control systems, inventory management, menu engineering, and purchasing.
- **Financial & Business Skills:** Hospitality accounting, cost control calculations, budget planning, and marketing strategies.
- **Hospitality Management:** Human resource management, hospitality law, communication skills, and health & safety practices.

Common Course Levels:

- **Certificate:** Focuses on operational skills, service techniques, and basic safety.
- **Diploma:** Focuses on advanced managerial-level skills, including cost control and strategic operations.

Practical Training

The curriculums emphasize hands-on training, supervised restaurant or kitchen management, and professional attachments.

Inquiries can be made on:

- Whether you are looking for a certificate or a diploma level?
- Are you interested in the production (cooking) side or the service/management side?
- Do you need it for an examining body (like KNEC)?

2. Tailoring Course Curricula

Key Components of Tailoring Courses:

- **Fundamental skills:** Introduction to sewing tools, machine operation, safety regulations, and maintenance.
- **Techniques:** Hand and machine stitching, sewing seams, hems, and finishing techniques.
- **Design and Drafting:** Pattern drafting for various styles, garment pattern modification, and understanding fashion design principles.
- **Material Selection:** Understanding fabric properties, handling materials, and fabric cutting
- **Garment Construction:** Creating garments for men and women, including shirts, trousers, skirts, and dresses.
- **Advanced Skills and Business:** Advanced alteration, garment repair, tailoring entrepreneurship, fashion portfolio development, and costing for business.

Common Course Structure Examples:

- **Short Course (Beginners):** 6 – week module covering basic stitches, machine operation, patterns, fabric, and creating a simple garment like a skirt.
- **6 – Month Program:** Covers sewing machine operation, pattern making, and stitching various garments.
- **Vocational Training (Modular):** Often split into Grades III, II and I, increasing in complexity from basic stitching to advanced garment construction and costing.
